Professional Summary

Production and Facilities Management professional with over 20 years of experience optimizing operations in oil and gas, embedded systems, and multi-unit property management. Delivered \$23 million in production increases and reduced downtime from 30–45 days to under 10 days annually by implementing custom SCADA/telemetry solutions, standardizing maintenance protocols, and developing comprehensive training programs. Technical expertise includes full-cycle production supervision, process instrumentation, and embedded hardware/software development using PIC, PLC, ARM, and ESP32 platforms with C and Python. Seeking a Production Management position to leverage adaptive problem-solving skills and cross-functional leadership to drive efficiency, safety, and upward mobility in complex operational environments.

Professional Experience

Production and Facilities Management Professional — Oil & Gas / Embedded Systems / Property Management | 2004 – Present

- Implemented custom SCADA and telemetry solutions to monitor process instrumentation and auxiliary systems, enabling real-time data acquisition and remote operational control.
- Developed embedded hardware and software using PIC, PLC, ARM, and ESP32 platforms with C and Python to automate production workflows and enhance system reliability.
- Standardized maintenance protocols and developed comprehensive training programs, reducing annual downtime from 30–45 days to under 10 days.
- Executed full-cycle production supervision and facilities management across multi-unit environments, optimizing safety compliance and operational efficiency through adaptive problem-solving and cross-functional leadership.
- Delivered \$23 million in production increases by analyzing operational data, identifying bottlenecks, and deploying targeted engineering improvements.

Technical Skills

SCADA Systems | Telemetry | PLC Programming | Embedded Systems (PIC, ARM, ESP32) | Process Instrumentation | C Programming | Python | Control System Integration | Production Optimization | Maintenance Protocol Standardization | Safety Compliance | Cross-Functional Leadership | Oil & Gas Operations | Multi-Unit Property Management

Key Achievements

- Delivered \$23 million in production increases through strategic operational optimization and deployment of custom SCADA/telemetry automation solutions.
- Reduced annual downtime from 30–45 days to under 10 days by engineering robust monitoring systems and standardizing preventive maintenance protocols.
- Designed and implemented embedded control architectures using C and Python on ARM/ESP32 platforms, improving system responsiveness and data accuracy in complex operational environments.
