Professional Summary

Controls and Field Support Engineer with over 20 years of experience optimizing industrial automation and production operations in the oil and gas sector. Proven expertise in PLC programming, SCADA/telemetry implementation, and full-cycle project management, including needs identification, scheduling, tracking, and reporting. Adept at delivering on-site installation, startup, troubleshooting, and maintenance of complex control systems while serving as a primary customer liaison to drive operational quality and satisfaction metrics. Combines deep technical proficiency in embedded systems and process instrumentation with a track record of standardizing maintenance protocols, authoring SOPs and validation documentation, and leading cross-functional teams to maximize uptime and safety.

Professional Experience

Controls & Production Engineer — Oil & Gas & Industrial Operations (Location) | Jan 2004 – Present

- Directed end-to-end project management for automation deployments, including needs identification, scheduling, tracking, and reporting to ensure operational quality and timely delivery.
- Executed on-site installation, startup, troubleshooting, and field service for PLC-based control systems, SCADA/telemetry networks, and EtherNet/IP industrial communications, reducing annual downtime from 30–45 days to under 10 days.
- Served as primary customer liaison and technical point of contact, evaluating system equipment performance, communicating project details with management, and driving customer satisfaction through proactive support and training.
- Developed and authored comprehensive technical documentation, including validation project plans, standard operating procedures (SOPs), qualification summary reports, system audits, and traceability matrices to support compliance and operational readiness.
- Standardized maintenance protocols and implemented custom SCADA/telemetry solutions across embedded hardware/software platforms (PIC, PLC, ARM, ESP32) and Motion Systems architectures using C and Python, delivering \$23 million in production increases.
- Designed and delivered comprehensive training programs for operations and maintenance personnel, instructing customers and internal teams on system operation, maintenance best practices, and safety compliance.

Technical Skills

PLC & Controls: PLC Programming, SCADA, Telemetry, Process Instrumentation, Embedded Hardware/Software, C, Python, PIC, ARM, ESP32 Field Service & Operations: Installation & Startup, Troubleshooting, Maintenance Protocols, Downtime Reduction, Operational Quality Assurance Documentation & Compliance: SOPs, Validation Project Plans, Qualification Reports, System Audits, Traceability Matrices, Technical Reports Project & Customer Management: Needs Identification, Scheduling, Tracking, Reporting, Customer Liaison, Cross-Functional Leadership, Training & Development

Key Achievements

- Delivered \$23 million in production increases by implementing custom SCADA/telemetry solutions and optimizing PLC-based control architectures across oil and gas operations.
- Reduced annual system downtime from 30–45 days to under 10 days through proactive troubleshooting, preventive maintenance protocols, and rapid field service response.
- Authored and standardized validation project plans, SOPs, and qualification reports, ensuring full traceability and compliance for complex automation deployments.
- Developed comprehensive training programs that improved customer and internal team proficiency in system operation, maintenance, and safety protocols.

Education

Bachelor's Degree in Engineering or Related Field
