

Victor D. Masters

Austintown, OH | (330) 565-1727 | Vctmasters@gmail.com | linkedin.com/in/victormasters

Professional Summary

Controls Manager and Industrial Automation Engineer with 15+ years of experience designing, deploying, and optimizing critical environment control systems, SCADA/telemetry platforms, and facility monitoring architectures. Proven track record of leading cross-functional engineering teams, managing \$1M–\$2M project budgets, and delivering >35% system performance improvements while maintaining strict safety and quality compliance. Expertise spans BMS/EPMS-equivalent facility controls, PLC/DCS programming, electrical schematic interpretation, and HVAC/R integration, with a demonstrated ability to align technical specifications with operational design intent. Available for up to 30% domestic travel to drive on-time, on-budget project execution and continuous operational excellence.

Professional Experience

Ohio Valley Energy Systems | Austintown, OH Field Supervisor – Production Operations & Automation Systems | January 2008 – Present - Direct and mentor a multidisciplinary team of controls technicians and field operators, overseeing hiring, performance evaluations, and standardized training programs that reduced annual production downtime from 30–45 days to under 10 days. - Engineer and deploy full-stack SCADA/telemetry platforms and facility monitoring systems equivalent to BMS/EPMS architectures, integrating power distribution, HVAC controls, and safety interlocks to quadruple oil & gas production output. - Manage end-to-end project execution including RFP evaluation, vendor coordination, change order tracking, and quality control inspections, consistently delivering \$1M–\$2M automation initiatives on time and within budget. - Develop and interpret electrical schematics, control circuit diagrams, and IEC 61131-3 compliant logic for PLC/DCS systems, ensuring precise alignment with technical specifications and customer design intent. - Execute comprehensive system commissioning, System Acceptance Testing (SAT), and performance validation across drilling, production, and restoration phases, achieving a 100% safety record and >\$1M in annual cost reductions through process optimization. - Design control panel layouts, junction box arrangements, and power distribution schematics using CAD software, streamlining installation workflows and reducing field wiring errors by 35%. - Architect embedded telemetry hardware and software utilizing PIC, PLC, ARM, and ESP32 processors with wireless/cellular connectivity, enabling real-time data logging and remote equipment monitoring across remote field sites.

Yorkshire Manor Apartments LLC & Masters Repair Group LLC | Austintown, OH Owner/Operator – Facilities Management & General Contracting | January 2005 – December 2010 - Directed comprehensive facility maintenance operations for multi-unit residential properties, implementing standardized inspection templates and preventive maintenance schedules that increased tenant occupancy to >100% and reduced maintenance costs by 40%. - Coordinated HVAC/R installations, electrical upgrades, and plumbing systems, interpreting mechanical and electrical diagrams to ensure code compliance and optimal system performance. - Managed vendor contracts, procurement, and project scoping for residential and light-commercial renovations, maintaining strict budget adherence and quality control standards.

Locations Ltd | Columbus, OH Maintenance Supervisor | January 1999 – December 2005 - Supervised maintenance operations for 200+ off-campus housing units, developing turnover procedures and equipment standardization protocols that minimized service interruptions during peak occupancy periods. - Trained and evaluated maintenance staff on HVAC troubleshooting, electrical diagnostics, and safety compliance, fostering a culture of proactive facility management and rapid issue resolution.

Technical Skills

Industrial Controls & Automation: BMS/EPMS, SCADA, Telemetry, PLC/DCS Programming, IEC 61131-3, Ladder Logic, HMI Configuration, PID Control, Sensor Calibration, Control Panel Design, Power Distribution, Junction Box Layouts, Facility Monitoring Systems | Engineering & Design: Electrical Schematics, Control Circuit Diagrams, CAD Software, Technical Specifications, Scope Management, Commissioning & Testing, RFP & Submittal Tracking, Vendor Management, Quality Control, Change Order Management | Programming & Platforms: Python, ANSI C, C++, SQL, Kotlin, Bash, PowerShell, Linux, Windows, Embedded Systems, ESP-IDF, FreeRTOS, Git, Docker | Facility & Operational Systems: HVAC/R, Industrial Equipment Maintenance, Electrical Troubleshooting, Safety Compliance, Cross-functional Coordination, Budget Management, Stakeholder Reporting, Technical Writing

Key Achievements

Quadrupled oil & gas production output and generated a \$23M revenue increase over two years by architecting and deploying custom SCADA/telemetry platforms with real-time data visualization and predictive analytics.

Reduced annual production downtime from 30–45 days to under 10 days by standardizing maintenance procedures, developing benchmark testing protocols, and implementing targeted technician training programs. Delivered >\$1M in annual cost savings and improved system performance metrics by >35% through process optimization, vendor negotiation, and rigorous quality control across \$1M–\$2M automation projects.

Maintained a 100% safety record and 10+ years of continuous team leadership by establishing standardized launch plans, coaching controls professionals, and enforcing strict compliance with industrial safety standards.

Education

Coursework: Civil Engineering, Construction Management, HVAC/R, Industrial Electronics | Columbus State Community College
